## Education

---

### University of Houston-Clear Lake

May 2026

Bachelor of Science in Computer Science

## Experience

---

### Information Technology Support Specialist

May 2024 – May 2026

University of Houston-Clear Lake

- Installed, configured, and maintained Windows-based desktops, peripherals, and classroom technology across campus environments.
- Diagnosed and resolved hardware, software, network connectivity, and user access issues while supporting students, faculty, and staff.
- Performed system updates, maintenance, and operational testing to ensure reliable performance and security compliance.
- Documented technical incidents, troubleshooting procedures, and resolutions to improve knowledge sharing and support consistency.

## Projects

---

### Cloud Infrastructure Deployment Lab | AWS, Terraform, Linux

May 2026 - Present

- Provisioned cloud infrastructure using Terraform to automate deployment of virtual machines, networking resources, and storage services in AWS.
- Configured IAM users, permissions, and security groups following cloud security best practices.
- Deployed and administered Linux virtual machines while monitoring system performance and resource utilization.
- Implemented backup and recovery procedures and documented deployment processes.

### AI-Study Analytics Dashboard | Python, HTML, JavaScript, CSS

April 2026 – May 2026

- Developed and deployed a full-stack web application using Python, Flask, REST APIs, and database technologies.
- Configured application environments, managed backend services
- implemented monitoring for application performance and reliability.

### AI-Powered Health & Fitness Application | Python, OpenAI API

Jan 2026 - April 2026

- Developed a Python-based AI fitness chatbot using OpenAI API and vector search to deliver context-aware workout recommendations, improving response accuracy and personalization.
- Managed API integrations and backend service deployment while troubleshooting performance and connectivity issues across application components.
- Implemented retrieval-augmented generation pipeline by integrating vector database search with LLM responses, enabling real-time, relevant fitness guidance.

## Skills

---

**Cloud & Infrastructure:** AWS (Learning), Azure (Learning), Terraform, Linux Administration, Virtualization, System Monitoring, Infrastructure Troubleshooting

**Networking & Systems:** TCP/IP, Network Connectivity Troubleshooting, Windows Administration, Fedora Linux, Device Configuration

**Programming:** Python, Java, C++, JavaScript, HTML, CSS

**Databases:** MySQL, MongoDB

**Tools:** GitHub, Oracle VirtualBox, Apache, Visual Studio Code, Microsoft Office, Autopsy

**Soft Skills:** Communication, Teamwork, Problem Solving, Leadership, Creativity, Critical Thinking, Problem Analysis, Bilingual, Management, Adaptability, Time Management
